

Project idea: Review the innovative performance of the smart living lab by conceptualizing it as a innovation niche / experimental space in the understanding of Strategic Niche Management (SNM) and Constructive Technology Assessment (CTA)

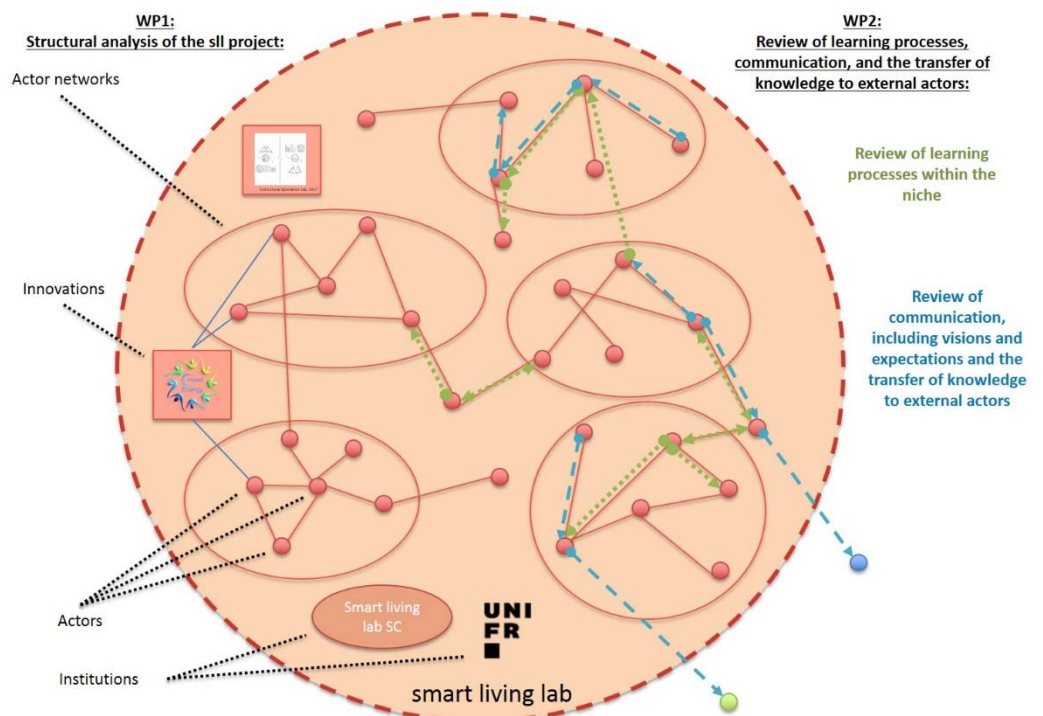

Research questions:

RQ1: Can the sll be conceptualized as a niche in the understanding of CTA/SNM and if yes, how does its structure look like and what functions are provided?

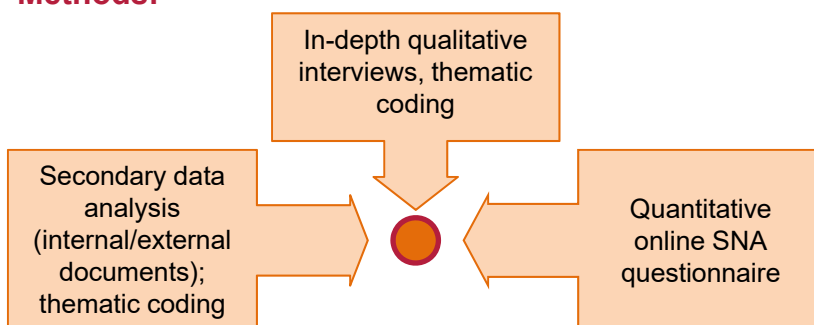

RQ2: What communication/collaboration flows and learning functions can be observed inside the living lab and how is the created knowledge translated to external actors?

Approach:

- **Structural and functional analysis of the smart living lab**
- **Review of the actor network within the smart living lab**
- **Review of internal and «cross-border» communication**

Methods:

Outputs:

- ✓ **Report on niche structure and processes**
- ✓ **Report on visions/ communication/ barriers**
- ✓ **Actor-innovation-communication map of sll**
- ✓ **Recommendations to internal actors**
